

Mailvio Integrations

Mailvio integration with Digioh

What Digioh do?

Digioh allows you to easily build email capture forms, surveys, preference centers, and landing pages integrated with Mailvio.

Digioh offers hundreds of form themes and supports multi-step forms, capturing phone numbers, and forms with custom fields.

Before Getting Started

Prior to integrating Mailvio with Digioh, you need an active Digioh account.

Integrating Mailvio with Digioh

Step 1: First, you'll need to grab some info from your Mailvio account. You'll need the group ID number for the group you want to add subscribers to, and you'll need your API key. To get the group ID head to the Group page, and select the group you want. The ID will be in the URL or at the right side of the page:

To get the API key, head to the API keys page in the Integration section of your account.

Step 2: With both pieces of information in hand, go to your Digioh account. Head to the Integrations page, and create a new integration.

Select Mailvio from the dropdown, and then set up a POST URL that looks like this:

[https://apiv2.mailvio.com/group/\[GROUP ID\]/subscriber](https://apiv2.mailvio.com/group/[GROUP ID]/subscriber)

Where "[GROUP ID]" is replaced with the actual group ID. So for group 98763 the URL would look like this

<https://apiv2.mailvio.com/group/98763/subscriber>

Set the POST type to JSON Raw then select the button Create the integration.

The integration should look like this:

Step 3: For Header 1 Key X-access-token .

For Header 1 Value Enter your Mailvio API Key

In the Raw Data to Send field, map the fields in Mailvio to the corresponding fields in Digioh.

It should look like this:

Save the advanced settings, and the integration is ready to go! Assign it to a box to start sending submissions to Mailvio.

Unique solution ID: #1091
